EDUCATION

- Nov 2020 - Sep 2024 B-Tech(Cse) at **SRM University AP** (GPA: 8.7/10)
- Jun 2018 - Mar 2020 Intermediate at Sri Sarada Institutions (GPA: 9.5/10)
- Jun 2017 - Apr 2018 Matriculation at RBPS (GPA: 10/10)

INTERNSHIP EXPERIENCE

Research Intern - SRM AP

Jun 2022 - Sep 2022

- Developed a project on extractive text summarization using TextRank algorithms.
- It is an effective technique for producing concise and relevant summaries while retaining 75 percent-age of crucial information and overall context
- This novel approach improves content understanding and processing efficiency in enormous amounts of text acheieving an accuracy of 0.50 in Rouge Score.

Artificial Intelligence Intern - Vodafone India

Jul 2022 - Aug 2022

- Completed an internship with Vodafone India, where I collaborated with a team to develop AI model using Tensorflow and gained hands-on experience in customizing and using algorithms using Python.
- Built a conversation entity using artificial intelligence where we trained the model using the AI to which we provide the dataset that should provide the answers as per the user requests.

PROJECTS

Automatic Text Summarization

Jun 2022 - Sep 2022

- Enforced a robust approach to induce terse and contextually applicable summaries while conserving critical information.
- It is implemented using an effective technique of text rank algorithm and Glove Embeddings created by Stanford University for producing concise summaries
- Utilizes a Kaggle dataset comprising 10,000 bank records. This data contains 12 distinct features about 10,000 clients of the bank, which serves as the primary source of data for training and predicting customer churn likelihood.
- Achieved a Rouge score of 0.50, demonstrating the model's effectiveness in summarization accuracy.

Tech: Python, NLP, Glove Embeddings.

Real Time Object Detection

Jun 2023 - Aug 2023

- Implemented a system that was able to detect objects in images and videos at a frame rate of 30 fps.
- It was acheived using YOLOv4 which works at 43.5 percent speed rate with accuracy of 0.90 on an average

Tech: Darknet, CNN, YOLOv4.

Hostel Management System

Jan 2023 - Mar 2023

- Created a user-friendly application for Hostel Management, where users/admin can use it for overall better hostel experience online.
- The website offers 3 functions for students and 2 functions for admin for seamless experience.
- Usage can reduce 20 percentage of administrative workload as it provides 5 different functionalities

Tech: MySQL, PHP, HTML, CSS.

Automated Plant Disease Detection

Jan 2024 - Apr 2024

- Developed an innovative CNN-based web application system for automated plant disease prediction and integrated weather forecasting.
- This technology is implemented as an interactive webpage for real-time user interaction, facilitating users to upload images and receive instant disease diagnoses
- Optimized the model's performance, reducing prediction time to under 2 seconds per image, ensuring a seamless user experience with 93 percentage of accuracy.

Tech: MobileNetV2, Python, Open API.

SKILLS

- **Programming Languages:** Python, SQL.
- **Technologies:** Artificial Intelligence and Machine Learning.
- **Developer Tools:** GitHub, Git, AWS.
- **Office Ware:** Microsoft Word, Excel, PowerPoint, Outlook.
- **Soft Skills:** Communication, Team Building, and Rational Thinking.
- **Languages:** Telugu, Hindi, and English.

CERTIFICATIONS

- Microsoft Azure Fundamentals
- Microsoft Power BI
- AI and ML - VOIS Vodafone

ACHIEVEMENTS

- Competed in Amazon ML Summer School 2023 and prevailed.
- Secured 3rd place in National Level SIP Abacus Competition.
- Secured 2nd place in State Level SIP Abacus Competition.

HOBBIES

- E-Sports
- Badminton
- Movies and Music
- Manga and Anime
